# PROGRESS IN UNDERSTANDING THE IMPACTS OF 3-D CLOUD STRUCTURE ON MODIS CLOUD PROPERTY RETRIEVALS FOR MARINE BOUNDARY LAYER CLOUDS

MODIS Science Team Meeting, Silver Spring, June 2016

Zhibo Zhang
Physics Department/JCET, UMBC

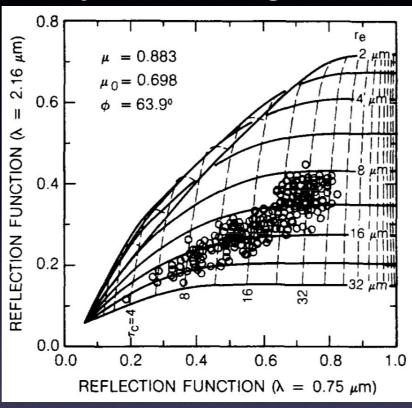

Frank Werner (UMBC), Daniel Miller (UMBC), Steven Platnick (GSFC), Andrew Ackerman (GISS), Larry Di Girolamo (UIUC), Kerry Meyer (GSFC), Alexander Marshak (GSFC), Gala Wind (GSFC), Guangyu Zhao (UIUC)

## Bi-spectral method for *simultaneous* retrieval of cloud optical thickness (COT) and effective radius (CER)

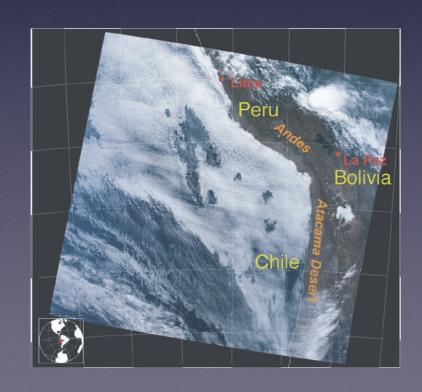

#### **Bi-spectral**

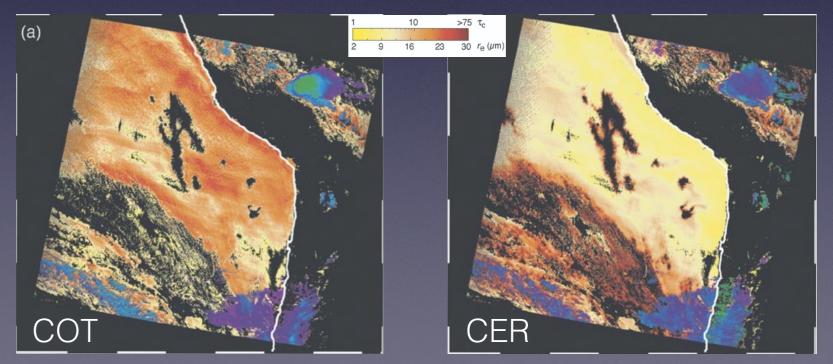

VNIR (e.g., 0.64, 0.86μm) band reflectance increases with COT, given a CER SWIR (e.g., 2.1, 3.7μm) band reflectance decreases with CER, given a COT

#### Nakajima and King 1990 JAS

eMAS, MASTER
Suomi-NPP,GOES-R, ...

Platnick et al. 2003 IEEE TGRS

## Key assumptions made in the operational MODIS cloud retrieval

- Within a pixel, cloud is both vertically and horizontally homogenous ("homogeneous pixel")
- A pixel is independent of surrounding pixels, i.e., no net horizontal photon transport ("independent pixel assumption—IPA")
- Cloud particle size distributions follow certain analytical functions, e.g., gamma or log-normal

What happens if a pixel is not homogeneous?

### Outline

#### • Theory:

- A novel framework based on 2-D Tayler expansion for quantifying the uncertainty in MODIS retrievals caused by sub-pixel reflectance inhomogeneity. (*Zhang et al. 2016*)
- How cloud vertical structure influences MODIS LWP retrievals. (Miller et al. 2016)

#### • Observation:

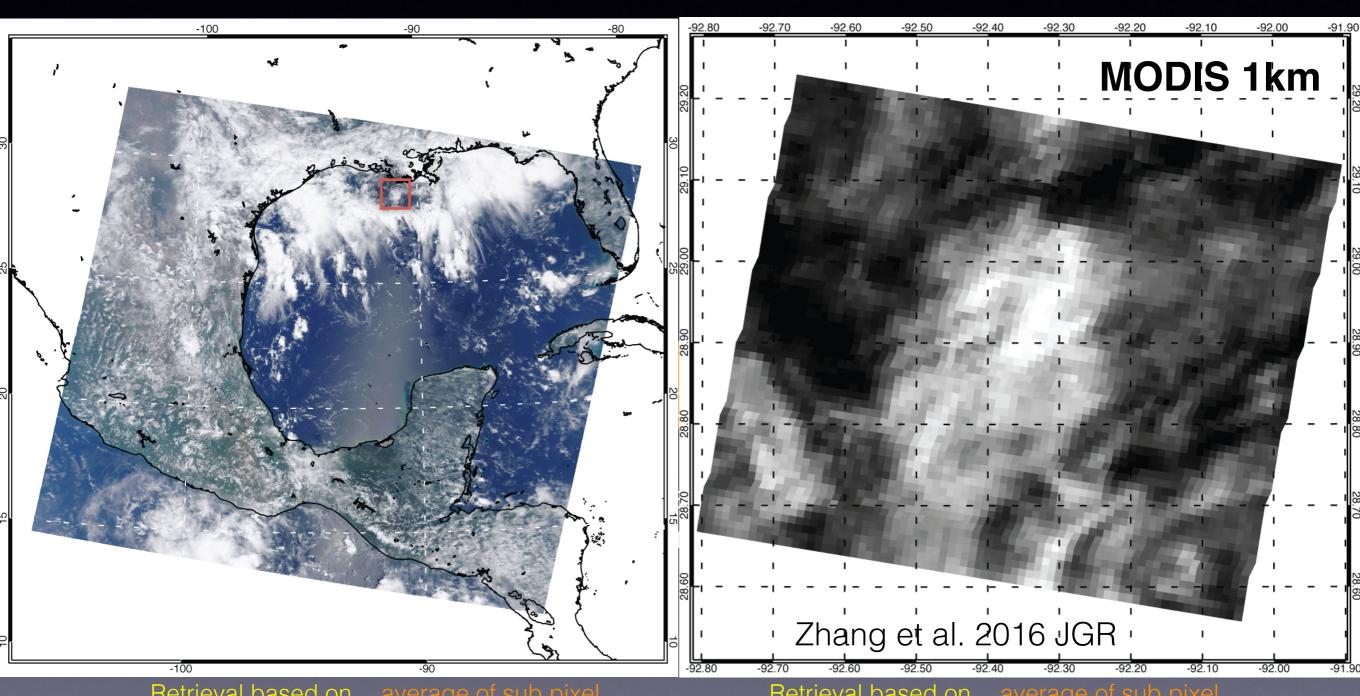

- Analysis of failed MODIS cloud property retrievals. (Cho et al. 2015)
- Cloud property retrievals from 15m resolution ASTER observations. (Werner et al. 2016)

#### Modeling:

• LES-Satellite observation simulator (Zhang et al. 2012, Miller et al. 2016).

### Theoretical advances I:

A novel framework for quantifying the impact of Subpixel inhomogeneity on MODIS retrievals

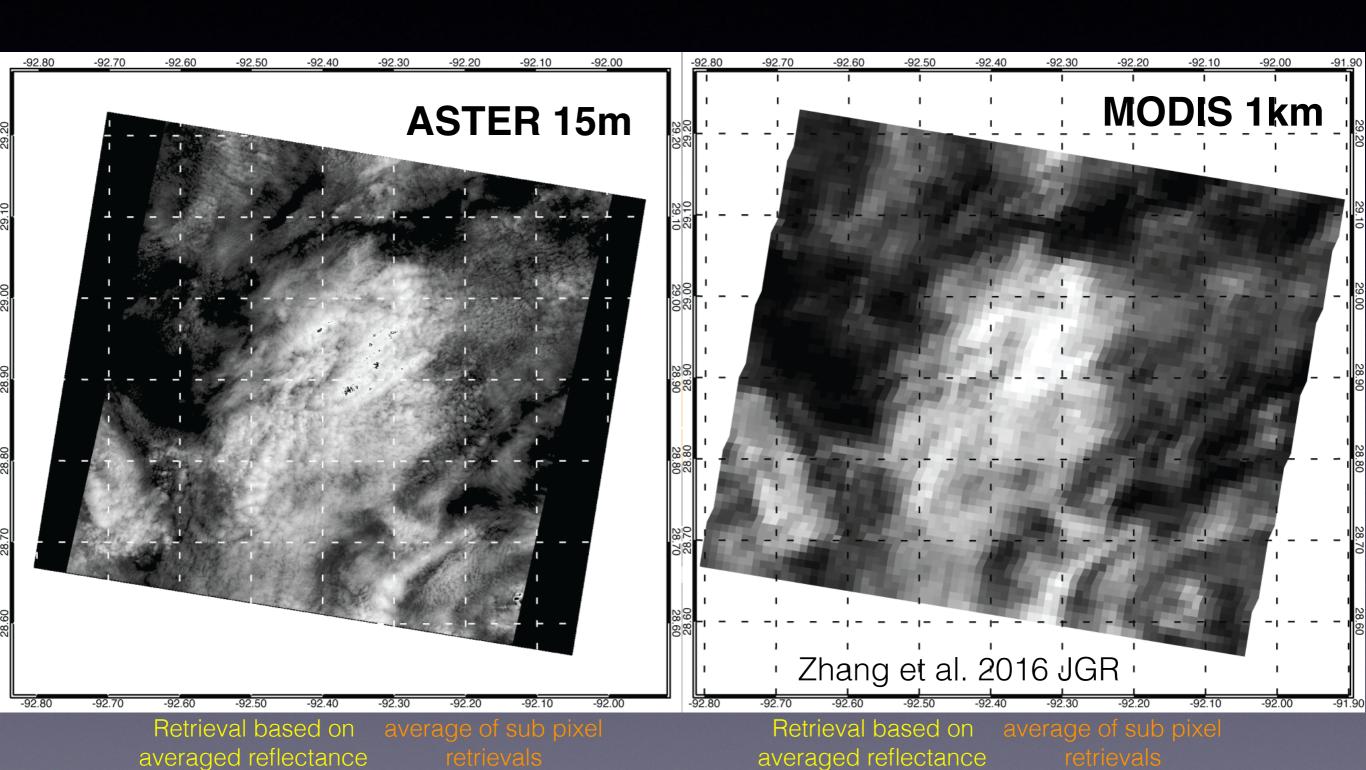

Retrieval based on average of sub pixel averaged reflectance

 $\Delta au = au \left( \overline{R_{VIS}}, \overline{R_{SWIR}} \right) - au \left( R_{VIS,i}, R_{SWIR,i} \right)$ 

Retrieval based on average of sub pixel averaged reflectance

$$\Delta r_e = r_e \left( \overline{R_{ extit{VIS}}}, \overline{R_{ extit{SWIR}}} 
ight) - r_e \left( R_{ extit{VIS},i}, R_{ extit{SWIR},i} 
ight)$$

### Horizontal Sub-pixel Inhomogeneity (SPI)

 $\Delta au = au \left( \overline{R_{V\!I\!S}}, \overline{R_{SW\!I\!R}} 
ight) - au \left( R_{V\!I\!S,i}, R_{SW\!I\!R,i} 
ight)$ 

PPHB

 $\Delta r_e = r_e \left( \overline{R_{VIS}}, \overline{R_{SWIR}} \right) - r_e \left( R_{VIS,i}, R_{SWIR,i} \right)$ 

### Plane-parallel homogeneous bias

Marshak et al. 2006

 $0.5 - f(r_{e})$   $0.67 \mu m$   $0.3 - \frac{f(r_{e}) + f(r_{e})}{f(r_{e}) + f(r_{e})/2}$   $0.2 - f(r_{e})$   $0.1 - \frac{f(r_{e}) + f(r_{e})/2}{5}$   $0.1 - \frac{f(r_{e})}{5}$   $0.2 - f(r_{e})$   $0.3 - \frac{f(r_{e})}{f(r_{e}) + r_{e}}$   $0.4 - \frac{f(r_{e})}{f(r_{e}) + r_{e}}$   $0.5 - \frac{f(r_{e})}{f(r_{e}) + r_{e}}$   $0.67 \mu m$   $0.1 - \frac{f(r_{e})}{f(r_{e}) + r_{e}}$   $0.1 - \frac{f(r_{e})}{f(r_{e})}$   $0.2 - \frac{f(r_{e})}{f(r_{e})}$   $0.3 - \frac{f(r_{e})}{f(r_{e})}$   $0.4 - \frac{f(r_{e})}{f(r_{e}) + r_{e}}$   $0.5 - \frac{f(r_{e})}{f(r_{e})}$   $0.7 - \frac{f(r_{e})}{f(r_{e})}$   $0.8 - \frac{f(r_{e})}{f(r_{e})}$   $0.9 - \frac{f(r_{e})}{f(r_{e})}$   $0.1 - \frac{f(r_{e})}{f(r_{e})}$   $0.1 - \frac{f(r_{e})}{f(r_{e})}$   $0.1 - \frac{f(r_{e})}{f(r_{e})}$   $0.2 - \frac{f(r_{e})}{f(r_{e})}$   $0.3 - \frac{f(r_{e})}{f(r_{e})}$   $0.4 - \frac{f(r_{e})}{f(r_{e})}$   $0.5 - \frac{f(r_{e})}{f(r_{e})}$   $0.7 - \frac{f(r_{e})}{f(r_{e})}$   $0.8 - \frac{f(r_{e})}{f(r_{e})}$   $0.9 - \frac{f(r_{e})}{f(r_{e})}$   $0.1 - \frac{f(r_{e})}{f(r_{e})}$   $0.1 - \frac{f(r_{e})}{f(r_{e})}$   $0.2 - \frac{f(r_{e})}{f(r_{e})}$   $0.3 - \frac{f(r_{e})}{f(r_{e})}$   $0.4 - \frac{f(r_{e})}{f(r_{e})}$   $0.5 - \frac{f(r_{e})}{f(r_{e})}$   $0.7 - \frac{f(r_{e})}{f(r_{e})}$   $0.8 - \frac{f(r_{e})}{f(r_{e})}$   $0.9 - \frac{f(r_{e})}{f(r_{e})}$   $0.1 - \frac{f(r_{e})}{f(r_{e})}$   $0.2 - \frac{f(r_{e})}{f(r_{e})}$   $0.3 - \frac{f(r_{e})}{f(r_{e})}$   $0.4 - \frac{f(r_{e})}{f(r_{e})}$   $0.5 - \frac{f(r_{e})}{f(r_{e})}$   $0.7 - \frac{f(r_{e})}{f(r_{e})}$   $0.8 - \frac{f(r_{e})}{f(r_{e})}$   $0.9 - \frac{f(r_{e})}{$ 

Because  $R_{VIS}$  is non-linearly dependent on COT, if a pixel is inhomogeneous the retrieved COT based on the averaged reflectance is smaller than the sub-pixel mean COT

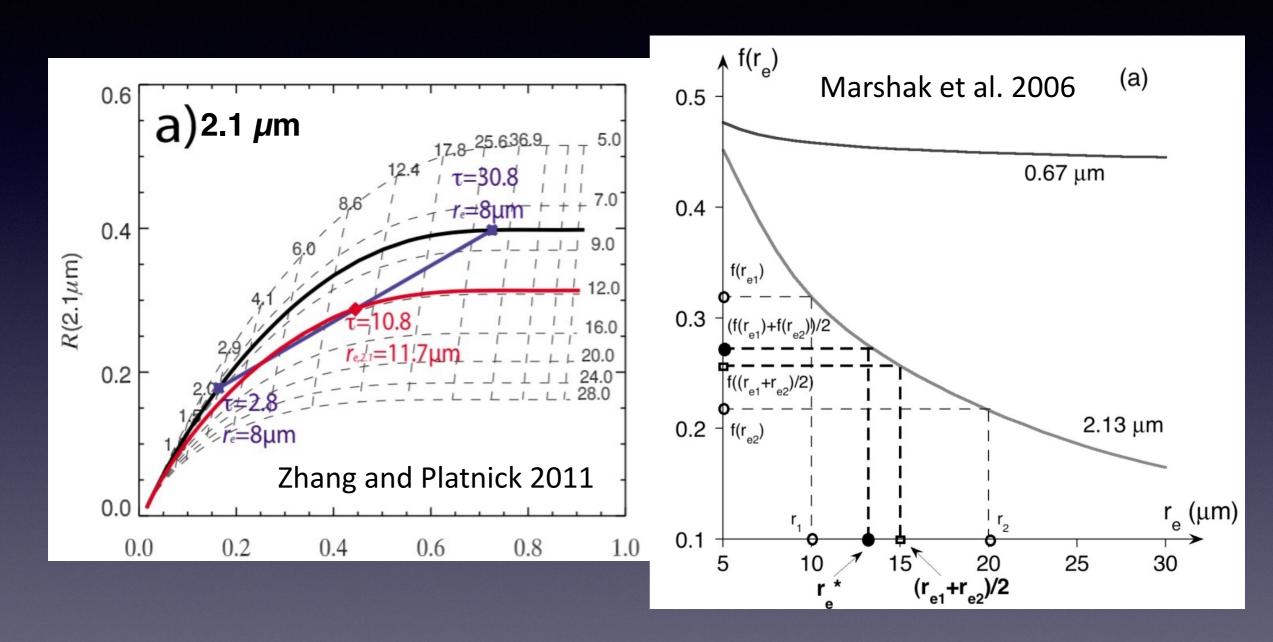

$$\frac{\partial^2 R_{VIS}}{\partial \tau^2} \neq 0 \qquad \frac{\overline{R_{VIS}} = \left[ R_{VIS}(\tau_1) + R_{VIS}(\tau_2) \right] / 2}{\tau^* \left( \overline{R_{VIS}} \right) < \left( \tau_1 + \tau_2 \right) / 2}$$

Underlying assumption:
COT and CER retrievals are mutually independent

Because  $R_{SWIR}$  is non-linearly dependent on CER, if a pixel is inhomogeneous the retrieved CER based on the averaged reflectance is smaller than the sub-pixel mean CER

$$\frac{\partial^{2} R_{SWIR}}{\partial r_{e}^{2}} \neq 0 \qquad \frac{\overline{R_{SWIR}} = \left[R_{SWIR}(r_{e,1}) + R_{SWIR}(r_{e,1})\right]/2}{r_{e}^{*} \left(\overline{R_{SWIR}}\right) < \left(r_{e,1} + r_{e,1}\right)/2}$$

### Plane-parallel homogeneous bias

$$r_e^* > (r_{e,1} + r_{e,1})/2$$

$$r_e^* < (r_{e,1} + r_{e,1})/2$$

Zhang et al. 2016 JGR (in press)

$$au\equiv au(R_{V\!IS},R_{SW\!IR})$$
 sub-pixel pixel mean 
$$R_{V\!IS,i}=\overline{R_{V\!IS}}+\Delta R_{V\!IS,i} \ ;i=1,2...N$$
 
$$r_e\equiv r_e\left(R_{V\!IS},R_{SW\!IR}\right)$$
 
$$R_{SW\!IR,i}=\overline{R_{SW\!IR}}+\Delta R_{SW\!IR,i} \ ;i=1,2...N$$

#### Plane-parallel homogeneous bias

$$\Delta \tau = \tau \left( \overline{R_{VIS}}, \overline{R_{SWIR}} \right) - \overline{\tau \left( R_{VIS,i}, R_{SWIR,i} \right)}$$

$$\Delta r_e = r_e \left( \overline{R_{VIS}}, \overline{R_{SWIR}} \right) - \overline{r_e \left( R_{VIS,i}, R_{SWIR,i} \right)}$$

$$r_{e}\left(R_{_{VIS,i}},R_{_{SWIR,i}}\right) = r_{e}\left(\overline{R_{_{VIS}}} + \Delta R_{_{VIS,i}},\overline{R_{_{SWIR}}} + \Delta R_{_{SWIR,i}}\right)$$

$$= r_{e}\left(\overline{R_{_{VIS}}},\overline{R_{_{SWIR}}}\right) + \frac{\partial r_{e}\left(\overline{R_{_{VIS}}},\overline{R_{_{SWIR}}}\right)}{\partial R_{_{VIS}}}\Delta R_{_{VIS,i}} + \frac{\partial r_{e}\left(\overline{R_{_{VIS}}},\overline{R_{_{SWIR}}}\right)}{\partial R_{_{SWIR},i}}\Delta R_{_{SWIR,i}} + \frac{\partial r_{_{E}}\left(\overline{R_{_{VIS}}},\overline{R_{_{SWIR}}}\right)}{\partial R_{_{SWIR}}}\Delta R_{_{SWIR,i}}$$
Sion

Taylor expansion of two-variable function

 $\frac{1}{2} \frac{\partial^{2} r_{e} \left(\overline{R_{_{VIS}}}, \overline{R_{_{SWIR}}}\right)}{\partial R_{_{VIS}}^{^{2}}} \Delta R_{_{VIS,i}}^{^{2}} + \frac{\partial^{2} r_{e} \left(\overline{R_{_{VIS}}}, \overline{R_{_{SWIR}}}\right)}{\partial R_{_{VIS}} \partial R_{_{SWIR}}} \Delta R_{_{SWIR,i}} \Delta R_{_{SWIR,i}} + \frac{1}{2} \frac{\partial^{2} r_{e} \left(\overline{R_{_{VIS}}}, \overline{R_{_{SWIR}}}\right)}{\partial R_{_{SWIR},i}^{^{2}}} \Delta R_{_{SWIR,i}}^{^{2}} + \varepsilon$ 

Second-order terms

Zhang et al. 2016 JGR (in press)

$$\tau \equiv \tau \left( R_{VIS}, R_{SWIR} \right) \qquad \text{sub-pixel pixel mean} \\ R_{VIS,i} = \overline{R_{VIS}} + \Delta R_{VIS,i} \\ r_e \equiv r_e \left( R_{VIS}, R_{SWIR} \right) \qquad R_{SWIR,i} = \overline{R_{SWIR}} + \Delta R_{SWIR,i} \qquad ; i = 1, 2... N$$
 
$$\overline{\Delta R_{SWIR,i}} = 0$$

#### Plane-parallel homogeneous bias

$$\Delta au = au \left( \overline{R_{VIS}}, \overline{R_{SWIR}} \right) - \overline{ au \left( R_{VIS,i}, R_{SWIR,i} \right)}$$

$$\Delta r_e = r_e \left( \overline{R_{VIS}}, \overline{R_{SWIR}} \right) - \overline{r_e \left( R_{VIS,i}, R_{SWIR,i} \right)}$$

$$\frac{1}{\tau(R_{VIS,i},R_{SWIR,i})} \approx \tau(\overline{R_{VIS}},\overline{R_{SWIR}}) + \frac{1}{2} \frac{\partial^{2} \tau(\overline{R_{VIS}},\overline{R_{SWIR}})}{\partial R_{VIS}^{2}} \sigma_{VIS}^{2} + \frac{\partial^{2} \tau(\overline{R_{VIS}},\overline{R_{SWIR}})}{\partial R_{VIS}} \operatorname{cov}(R_{VIS},R_{SWIR}) + \frac{1}{2} \frac{\partial^{2} \tau(\overline{R_{VIS}},\overline{R_{SWIR}})}{\partial R_{SWIR}^{2}} \sigma_{SWIR}^{2}$$

$$\frac{1}{2} \frac{\partial^{2} \tau(\overline{R_{VIS}},\overline{R_{SWIR}})}{\partial R_{VIS}^{2}} \sigma_{VIS}^{2} + \frac{\partial^{2} \tau(\overline{R_{VIS}},\overline{R_{SWIR}})}{\partial R_{VIS}} \operatorname{cov}(R_{VIS},R_{SWIR}) + \frac{1}{2} \frac{\partial^{2} \tau(\overline{R_{VIS}},\overline{R_{SWIR}})}{\partial R_{SWIR}^{2}} \sigma_{SWIR}^{2}$$

$$\frac{1}{2} \frac{\partial^{2} \tau(\overline{R_{VIS}},\overline{R_{SWIR}})}{\partial R_{VIS}^{2}} \sigma_{VIS}^{2} + \frac{\partial^{2} \tau(\overline{R_{VIS}},\overline{R_{SWIR}})}{\partial R_{VIS}} \operatorname{cov}(R_{VIS},R_{SWIR}) + \frac{1}{2} \frac{\partial^{2} \tau(\overline{R_{VIS}},\overline{R_{SWIR}})}{\partial R_{SWIR}^{2}} \sigma_{SWIR}^{2}$$

Zhang et al. 2016 JGR (in press)

$$\tau \equiv \tau \left( R_{VIS}, R_{SWIR} \right) \qquad \text{sub-pixel pixel mean} \\ R_{VIS,i} = \overline{R_{VIS}} + \Delta R_{VIS,i} \\ r_e \equiv r_e \left( R_{VIS}, R_{SWIR} \right) \qquad R_{SWIR,i} = \overline{R_{SWIR}} + \Delta R_{SWIR,i} \qquad ; i = 1, 2...N \\ \overline{\Delta R_{SWIR,i}} = 0$$

#### Plane-parallel homogeneous bias

$$\Delta \tau = \tau \left( \overline{R_{VIS}}, \overline{R_{SWIR}} \right) - \overline{\tau \left( R_{VIS,i}, R_{SWIR,i} \right)}$$

$$\Delta r_e = r_e \left( \overline{R_{VIS}}, \overline{R_{SWIR}} \right) - \overline{r_e \left( R_{VIS,i}, R_{SWIR,i} \right)}$$

PPHB

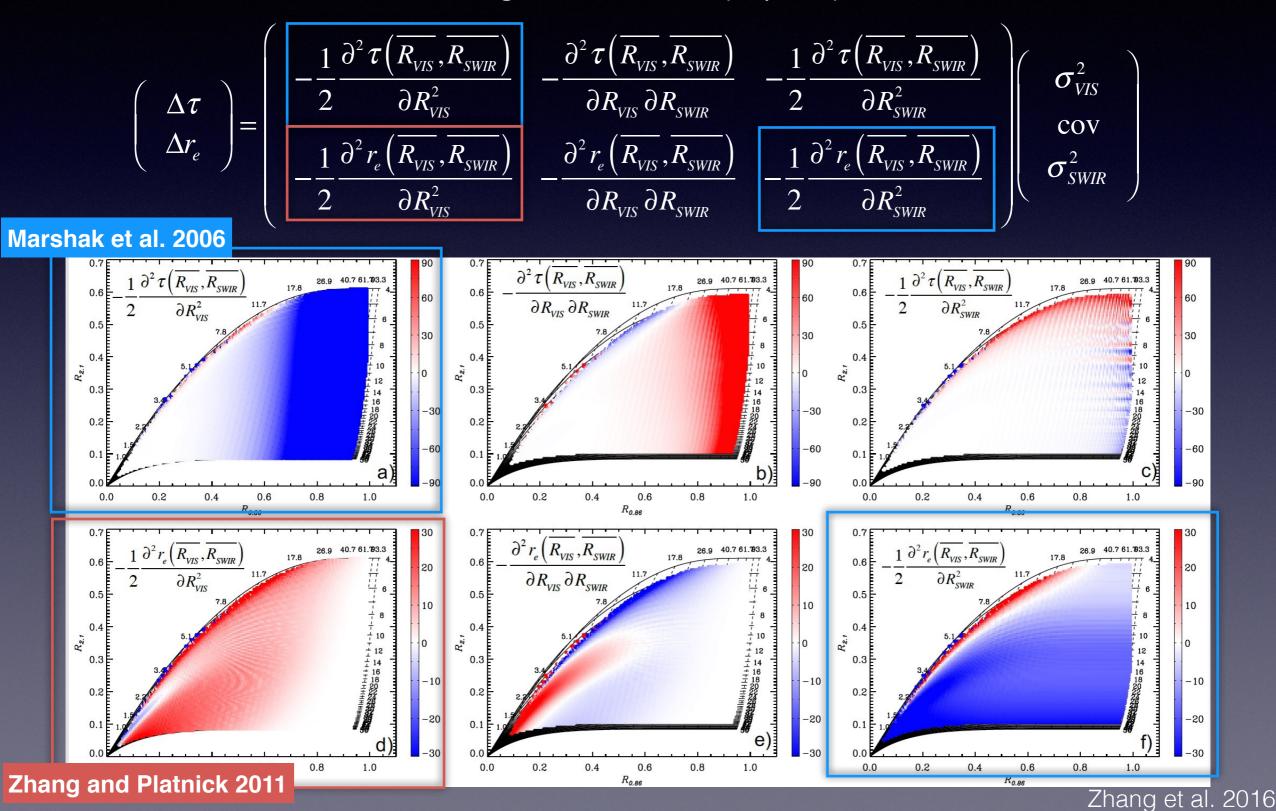

Inhomogeneity matrix

$$\begin{pmatrix} \Delta \tau \\ \Delta r_{e} \end{pmatrix} = \begin{pmatrix} -\frac{1}{2} \frac{\partial^{2} \tau(\overline{R_{VIS}}, \overline{R_{SWIR}})}{\partial R_{VIS}} & -\frac{\partial^{2} \tau(\overline{R_{VIS}}, \overline{R_{SWIR}})}{\partial R_{VIS} \partial R_{SWIR}} & -\frac{1}{2} \frac{\partial^{2} \tau(\overline{R_{VIS}}, \overline{R_{SWIR}})}{\partial R_{SWIR}} \\ -\frac{1}{2} \frac{\partial^{2} r_{e}(\overline{R_{VIS}}, \overline{R_{SWIR}})}{\partial R_{VIS}} & -\frac{\partial^{2} r_{e}(\overline{R_{VIS}}, \overline{R_{SWIR}})}{\partial R_{VIS} \partial R_{SWIR}} & -\frac{1}{2} \frac{\partial^{2} r_{e}(\overline{R_{VIS}}, \overline{R_{SWIR}})}{\partial R_{SWIR}} \end{pmatrix} \begin{pmatrix} \sigma_{VIS}^{2} \\ \cos v \\ \sigma_{SWIR}^{2} \end{pmatrix}$$

Zhang et al. 2016 JGR (in press)

Numerical simulation

Prediction from our framework

Correlation

With this framework, we will be able to quantify the pixel-level uncertainty due to PPHB in the operational MODIS products!

Our new framework for the PPHB works very well in the LES case study. It is being tested using ASTER observations and global MODIS observations.

### Theoretical advances II:

Impact of cloud vertical structure on MODIS LWP retrieval

$$LWP = C\rho_{w}\tau r_{e}$$

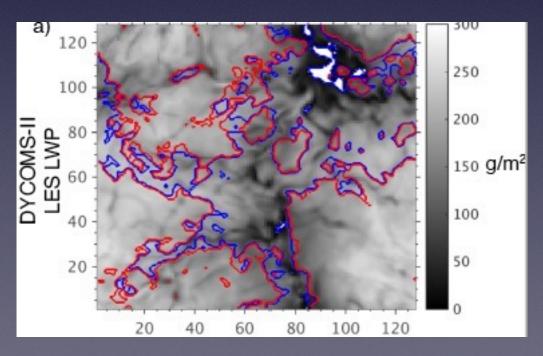

$$r_e(\tau) = r_e^* \left( \frac{\tau_{tot} - \tau}{\tau_{tot}} \right)^{\beta}$$

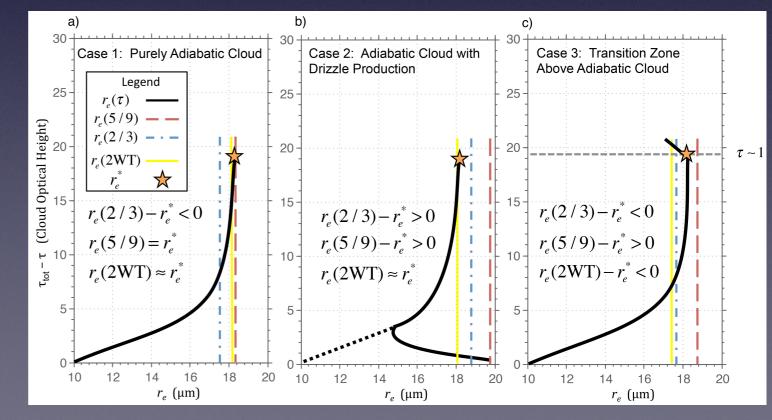

$$LWP = \frac{2}{3}\rho_{l}\int_{0}^{\tau_{tot}} r_{e}(\tau)d\tau = \frac{2}{3}\rho_{l}\frac{1}{\beta+1}r_{e}^{*}\tau_{tot}$$

Homogeneous cloud:  $\beta$ =0; C=2/3 Adiabatic cloud:  $\beta$ =1/5; C=5/9

Which one is better? *it depends...* 

Miller et al. 2016 JGR

(See Dan Miller's poster)

### Outline

#### • Theory:

- A novel framework based on 2-D Tayler expansion for quantifying the uncertainty in MODIS retrievals caused by sub-pixel reflectance inhomogeneity. (*Zhang et al. 2016*)
- How cloud vertical structure influences MODIS LWP retrievals. (Miller et al. 2016)

#### Observations:

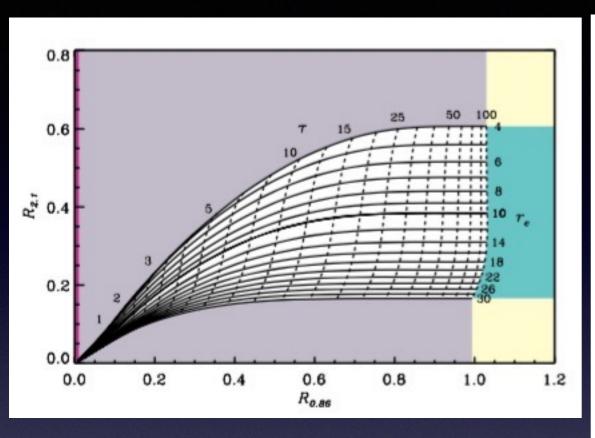

- Analysis of failed MODIS cloud property retrievals. (Cho et al. 2015)
- Cloud property retrievals from 15m resolution ASTER observations. (Werner et al. 2016)

#### Modeling:

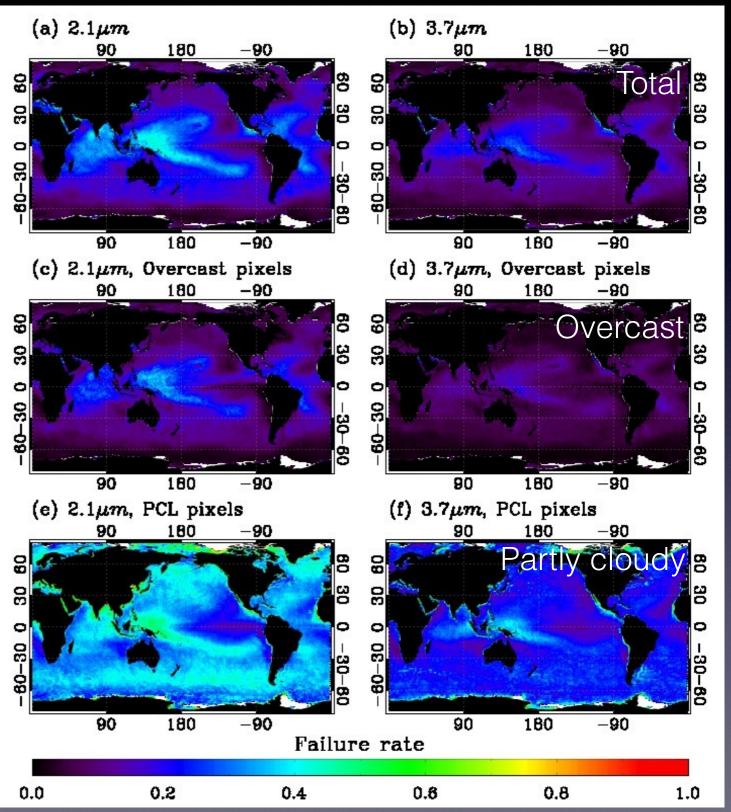

• LES-Satellite observation simulator (Zhang et al. 2012, Miller et al. 2016).

#### Failed MODIS retrievals for MBL clouds

Annual mean retrieval failure rates

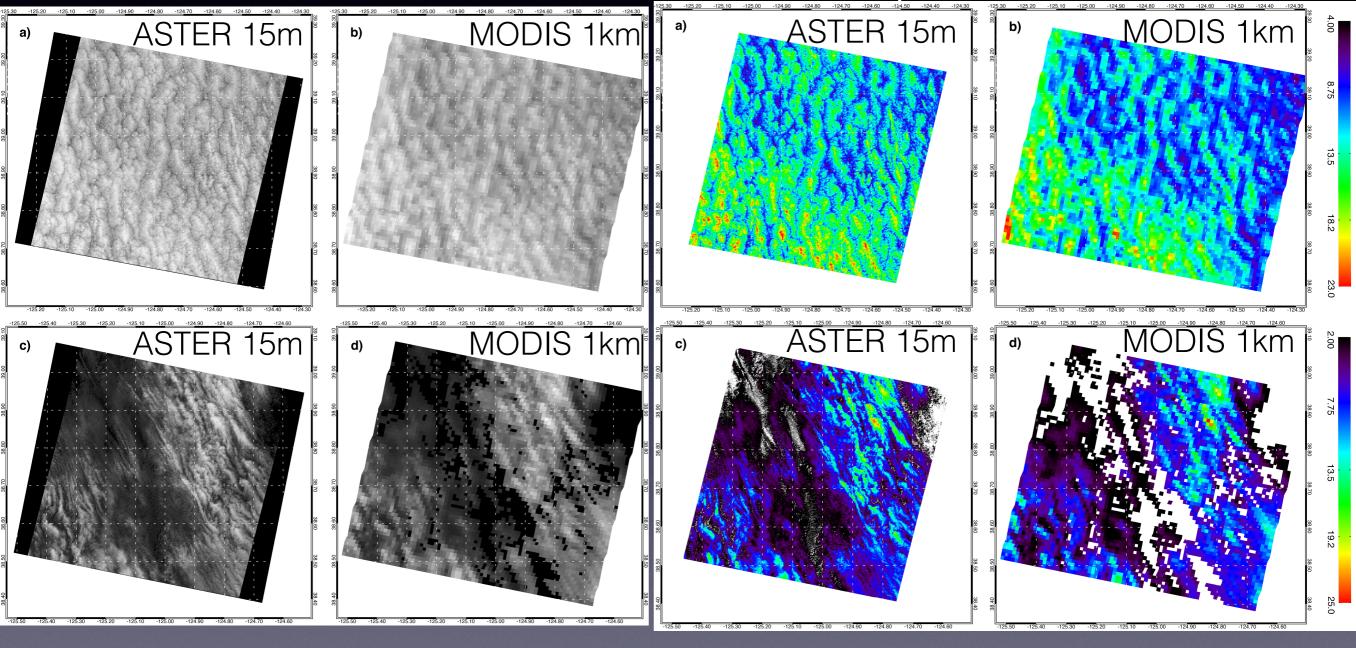

The retrieval based on the 0.86 µm and 2.1 µm MODIS channel combination has an overall failure rate of about 16% (10% for the 0.86 µm and 3.7 µm combination). Failure rates can be much higher in certain regions, e.g., broken Cu.

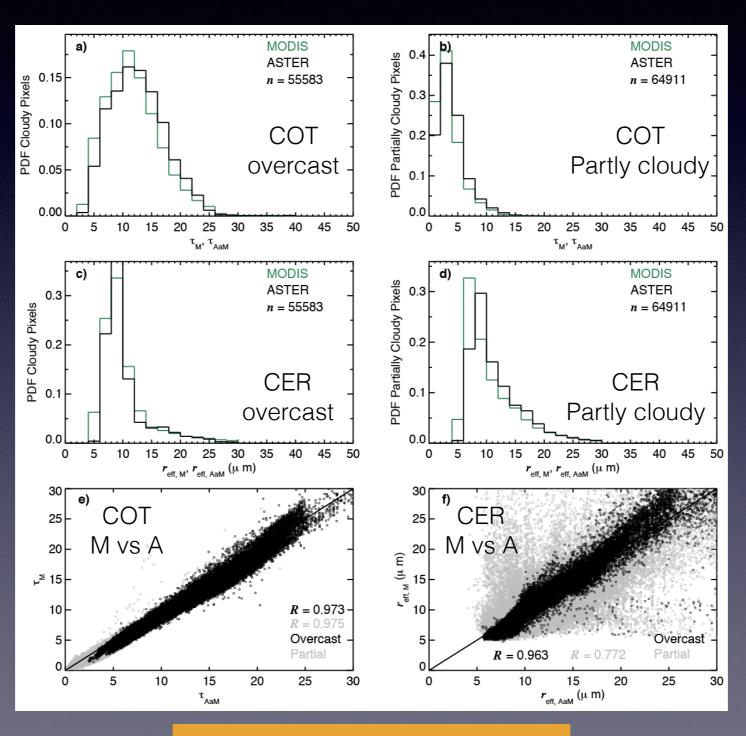

## Cloud property retrievals from high-resolution ASTER observations

Cloud Reflectance

## Summary

#### • Theory:

- A novel framework based on 2-D Tayler expansion for quantifying the uncertainty in MODIS retrievals caused by sub-pixel reflectance inhomogeneity. (*Zhang et al. 2016*)
- How cloud vertical structure influences MODIS LWP retrievals. (Miller et al. 2016)

#### • Observation:

- Analysis of failed MODIS cloud property retrievals. (Cho et al. 2015)
- Cloud property retrievals from 15m resolution ASTER observations. (Werner et al. 2016)

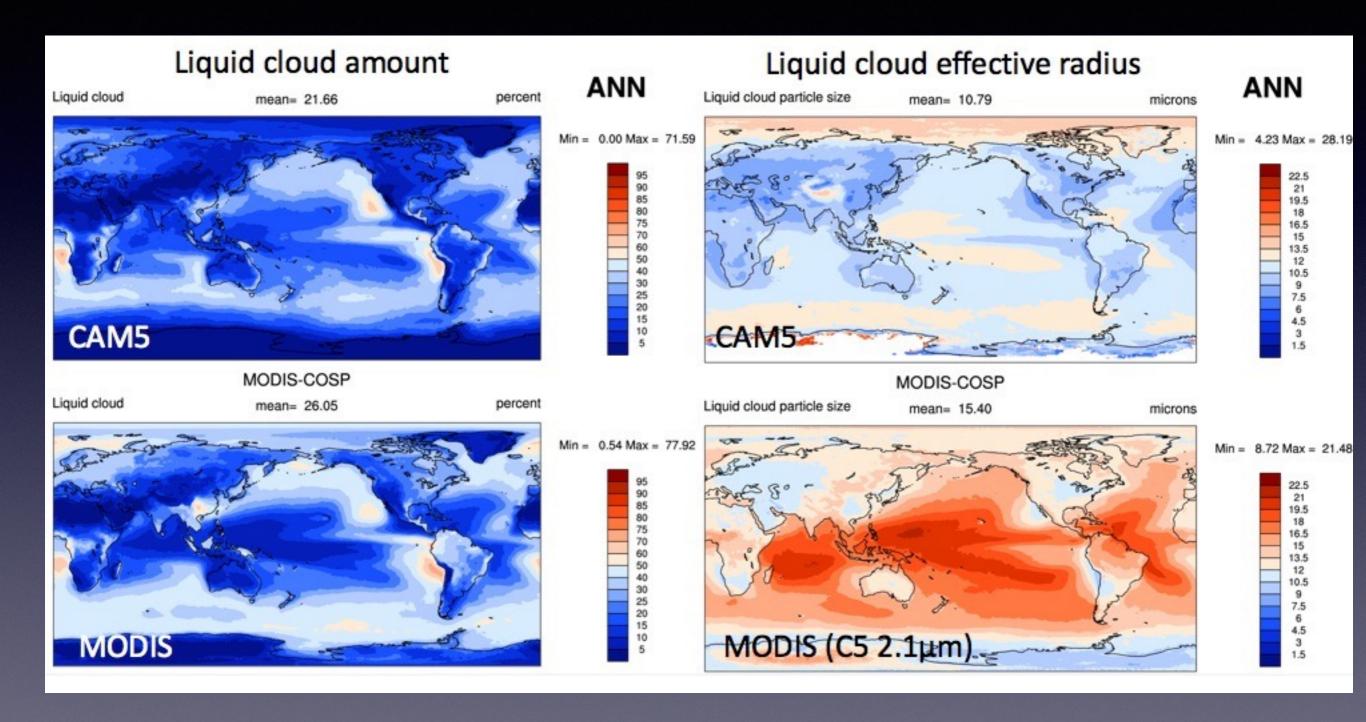

#### Modeling:

• LES-Satellite observation simulator (Zhang et al. 2012, Miller et al. 2016).

## Thanks for your attention

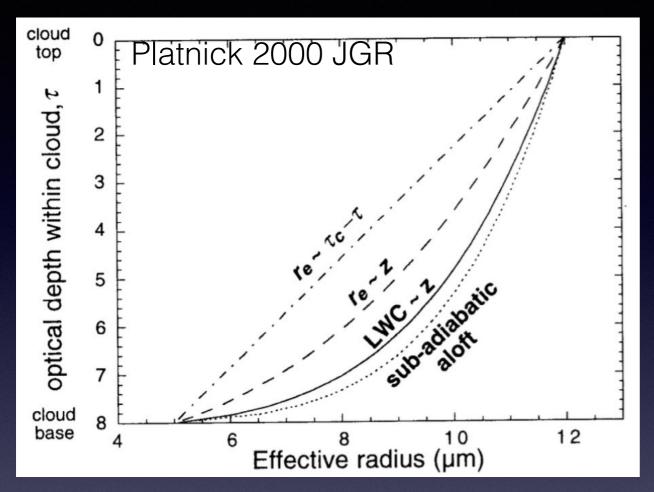

Questions?

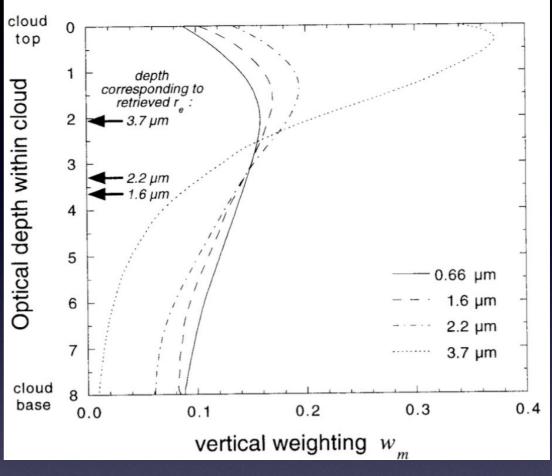

## Why are these issues important?

A better understanding of these issues will help us to better understand the uncertainties and potential errors in MODIS product, which hopefully could eventually lead to better simulation of MBL cloud in GCM.

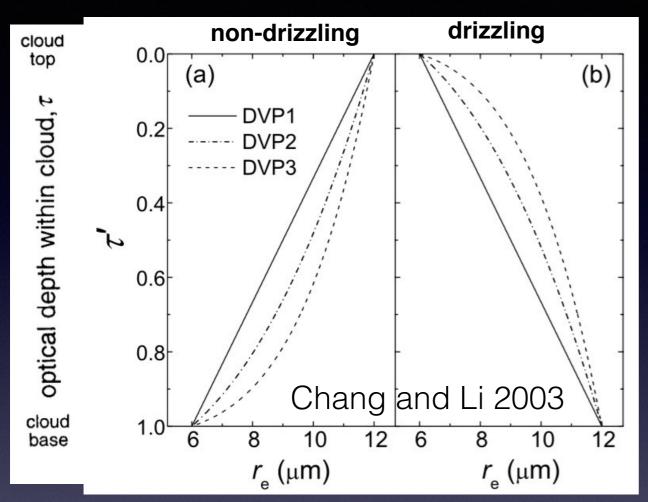

## Cloud Vertical Structure?

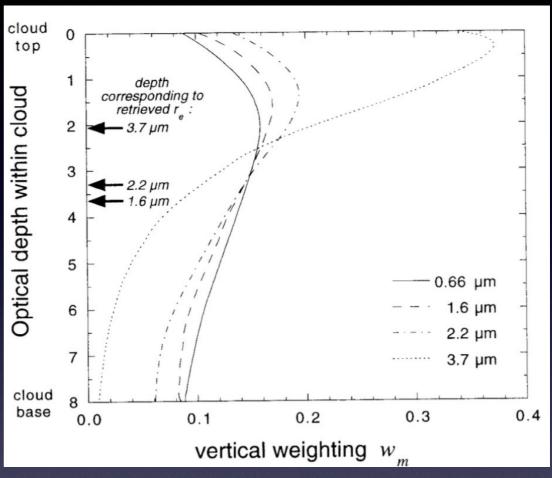

- SWIR band Cloud reflectance is more sensitive to the microphysics of cloud top than lower portion of cloud, which can be explained by the vertical weighting function.
- As predicted by the vertical weighting function, the 2.1  $\mu$ m band penetrates and therefore "sees" deeper into the cloud than the 3.7  $\mu$ m band.
- An important implication for retrieval is that CER2.1 < CER3.7 for pure adiabatic cloud structure.

## Cloud Vertical Structure?

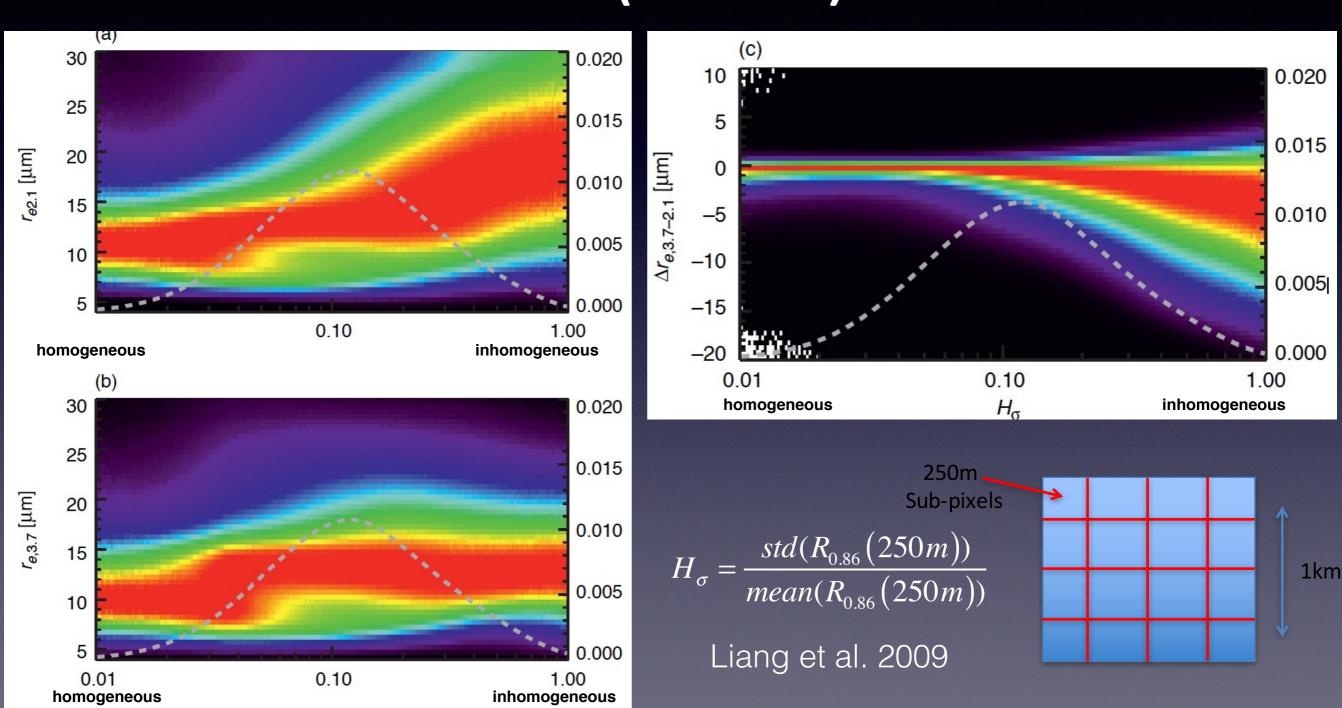

- SWIR band Cloud reflectance is more sensitive to the microphysics of cloud top than lower
  portion of cloud, which can be explained by the vertical weighting function.
- As predicted by the vertical weighting function, the 2.1  $\mu$ m band penetrates and therefore "sees" deeper into the cloud than the 3.7  $\mu$ m band.
- An important implication for retrieval is that CER2.1 < CER3.7 for pure adiabatic cloud structure.

Warm rain process leads to an increase of CER from cloud top to cloud base. 3.7  $\mu$ m band has smaller penetration depth CER2.1 > CER3.7. But a large fraction of pixels with CER2.1 > CER3.7 are thin and unlikely to be drizzling

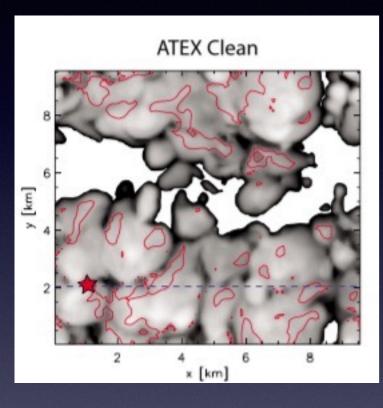

## Plane-parallel homogeneous bias (PPHB)?

The difference between CER2.1 and CER3.7 (CER 3.7-CER2.1) increases when MBL cloud becomes more inhomogeneous. ~ PPHB or 3-D effects?

### Independent pixel assumption?

LES cloud fields

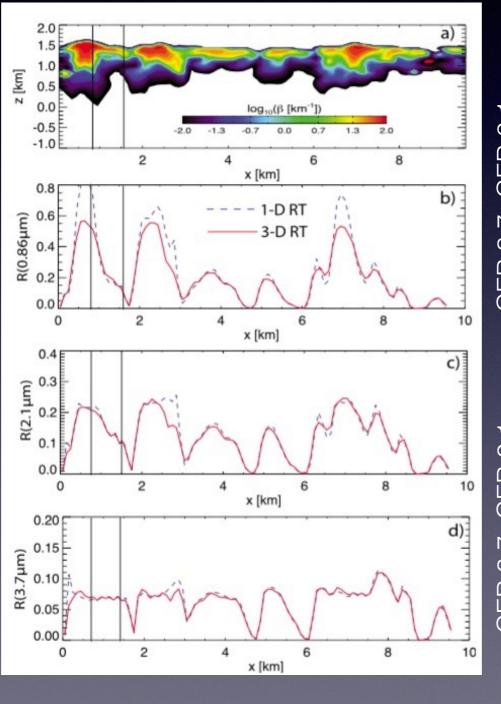

$$r_{e,\lambda} = r_{e,\lambda}^* + \Delta r_{e,\lambda}^{3D} + \Delta r_{e,\lambda}^{PPHB}$$

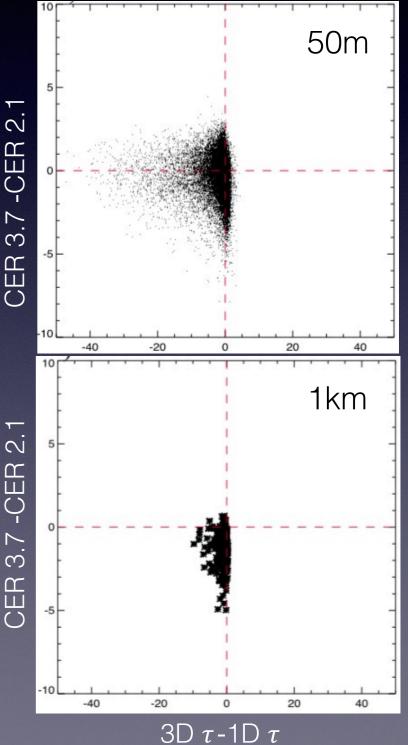

$$|\Delta r_{e,2.1}^{3D}| > |\Delta r_{e,3.7}^{3D}|$$

$$\Delta r_{e,2.1}^{PPHB} > \Delta r_{e,3.7}^{PPHB} > 0$$

#### Synthetic retrievals

Zhang et al. 2012 JGR

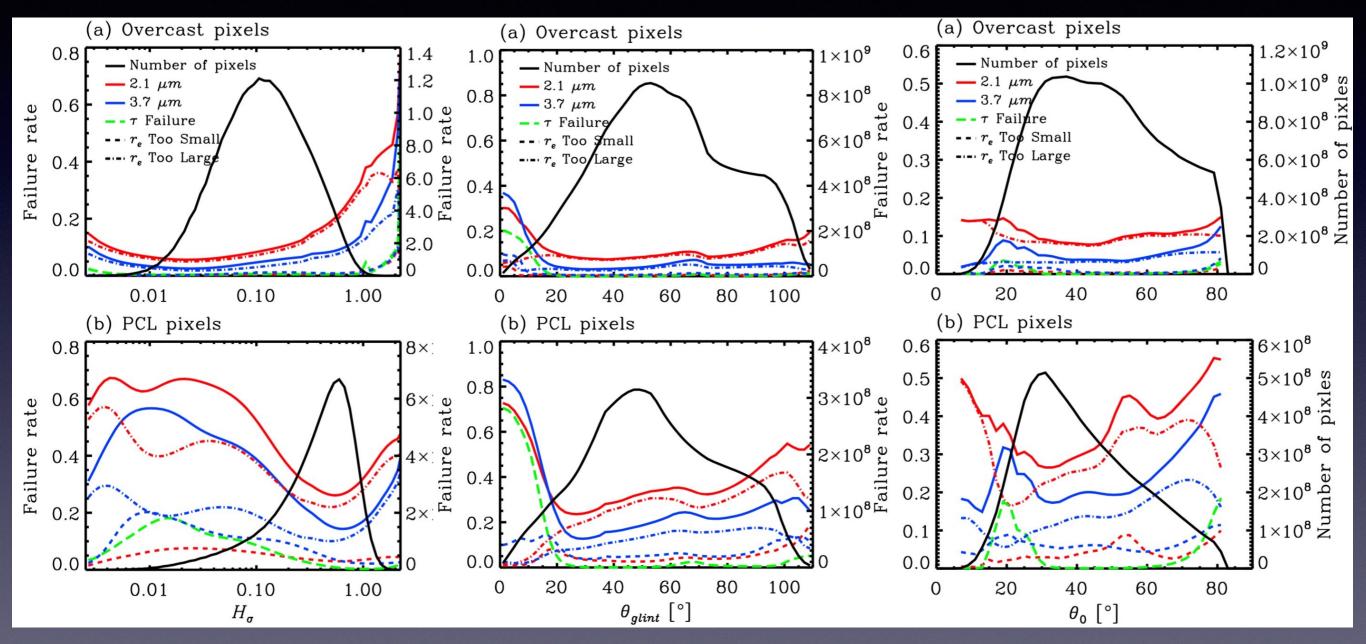

## Other possible reasons

- Algorithm issues, e.g., bugs in the code, errors in ancillary data, etc.
- Cloud particle size distributions deviate from the assumed Gamma or Log-normal distributions [Zhang 2013 JQSRT].
- Surface contamination.
- Thermal correction in 3.7 μm retrievals.

## Take-home messages

- Although looking at the same clouds, MODIS 3.7 $\mu$ m band retrieves significantly smaller CER for MBL clouds than the 2.1  $\mu$ m band. This spectral CER difference has also been noted by other teams using independent algorithms.
- The difference shows a strong dependence on sub-pixel inhomogeneity (SPI), which cannot be explained by the "traditional" PPHB that assumes CER and COT retrievals to be independent.
- A new theoretical framework is developed to provide a more comprehensive understanding of how SPI influences both CER and COT retrievals in a mutually dependent way.
- The new framework can provide reasonable explanation for the spectral CER difference and its dependence on SPI.

## Failed retrieval analysis

## Failed retrieval analysis
